

Comprehensive, cloud-based email security

GFI MailEssentials® Online is a cloud-based email security solution that offers comprehensive spam and virus protection, built-in continuity with always-on backup mail service and optional integrated archiving. The service is compatible with any email infrastructure and can be implemented in minutes.

GFI Software™ has been delivering award-winning, server-based email security solutions for years – helping even the most demanding organizations meet their daily security needs. GFI MailEssentials Online is built on that foundation and expertise, providing first-rate email security to help administrators build a secure and scalable messaging infrastructure.

GFI MailEssentials Online is part of GFI®'s family of email security solutions, offering organizations the ultimate in deployment flexibility via a hosted service, on-premise software or a hybrid of these options.

Highly effective
inbound and outbound
spam and virus filtering

Integrated **email**
continuity and **optional**
archiving

Cost-effective
and **easy to use**

BENEFITS

- » Fully cloud-based solution that requires no hardware or software to be downloaded or maintained.
- » Straightforward, cost-effective pricing with no capital expenditure or start-up costs.
- » Built-in email continuity with automated queuing and on-demand mail service.
- » All-in-one email security with robust defense against spam, viruses, and other email borne threats.
- » Industry-leading combination of zero-hour virus detection, virtualization-based malware recognition, and traditional signature-based antivirus engines.
- » Rapid deployment, with immediate protection and no ongoing management requirements.
- » Choice of fine-grained control over service or simply “set it and forget it”.
- » Scalable and reliable through use of multiple redundant systems in multiple data centers.
- » Responsive, competent, locally-based technical support by email or phone.

GFI MailEssentials® Online

Hosted email security and spam filtering service

Effectiveness

In a fraction of a second, GFI MailEssentials Online scans incoming messages using both traditional and leading-edge technologies to detect spam – message signature analysis; authenticity checks; an extensive heuristic rule set; continually evolving databases of URLs, network addresses, mail servers, and other identifying elements known to be used in phishing attacks and in unsolicited bulk email; real-time message source analysis; and customizable domain-specific and user-specific whitelists and blocklists. The result is a highly adaptive system and a dramatic reduction in junk email-relieving a significant burden for email users and system administrators.

Network defense

GFI MailEssentials Online helps you reduce risk, free up network bandwidth and ease mail server load by blocking practically all spam and email threats before they reach your network.

Continuity

GFI MailEssentials Online's built-in email continuity feature enables you to continue accessing, responding to, and sending email messages, even in the event of a network outage or an on-premise mail server outage. GFI MailEssentials Online automatically queues your organization's mail and allows users to continue accessing and responding to those messages via the solution's control panel, even while your mail server is offline.

Industry-leading virus protection

GFI MailEssentials Online combines traditional signature-based antivirus engines, pattern-based zero-hour virus detection and VIPRE® Antivirus's virtualization-based threat recognition to defeat today's sophisticated and fast-moving malware threats.

Inbound/Outbound email filtering

GFI MailEssentials Online scans inbound emails and attachments and allows the automated addition of configurable disclaimers or signatures to outbound messages. The service also prevents inappropriate messages from being sent from your network – preventing your mail server from blocklisting and protecting your company's reputation in the event a server or workstation is compromised.

Directory harvest and DoS attack prevention

By filtering inbound SMTP traffic in the cloud before it reaches your network, the service protects your infrastructure against directory harvesting, large-scale spam runs, denial of service attacks and other threats.

Intuitive web-based control panel

The easy-to-use web-based control panel allows administrators and users to effectively and efficiently manage their email security. Users can easily access quarantined messages as well as queued messages in the event of a mail server failure.

Hosted individual junk mail quarantines and digests

With GFI MailEssentials Online, customers can retain detected spam messages in a quarantine hosted outside the company's network. Users can view the quarantine at any time or can choose to simply receive a convenient, automatically emailed summary of detected junk mail to quickly identify any potential false positives and release these from the quarantine. The digest messages can be scheduled as infrequently as once per week or as frequently as three times per day.

Configurable user preferences

Administrators can set the spam filtering configuration, or can delegate the ability to do so to the individual users so that the service works for an organization's specific needs.

Message logging and search

Through GFI MailEssentials Online's comprehensive message logging, administrators can search for messages and access detailed delivery logs for all recent inbound and outbound messages. These logs include message envelope details, message headers, message size, the receiving server, and the exact response from that server so that administrators can easily determine the exact disposition of happened to any given message.

Available email archive

GFI MailEssentials Online includes an optional, fully integrated archive service that encrypts and stores inbound, outbound and internal messages in multiple geographically distributed data centers. This easy-to-use service allows customers to retain their historical messages for subsequent search and retrieval, in order to comply with regulations and protect the important information contained in their email communications.

The GFI MailEssentials Online Control Panel provides a central view of all key system information and gives ready access to common functions and settings
