THE MOST RESILIENT VOIP GATEWAY IN ITS CLASS

The Vega 100 VoIP gateway connects digital telephony equipment to IP networks. Each unit purchased is factory configured with capacity for 30 simultaneous calls. This unit cannot be expanded beyond 30 simultaneous calls.

The available Sangoma Resiliency Enablement Suite (SRES) makes the Vega 100 the most resilient gateway in its class. In the event of a WAN failure, IP phones behind the Vega gateway can continue to call each other, be routed to a backup switch or connected directly to the PSTN. In addition, the use of the Sangoma Network Appliance Provisioning (SNAP) tool makes the Vega 100 the easiest to provision gateway on the market.

Each E1/T1 interface can be independently configured as network side or terminal side. The Vega 100 gateway can therefore be connected to a PBX or the PSTN. This configuration provides:

- No disruption to the configuration of existing equipment
- Flexibility & choice for call routing

OPEN, NON-PROPRIETARY INTERFACES

The Vega 100 gateway supports the following signalling schemes:

- ETSI, VN4, ISDN
- NI1, NI2, AT&T 5ESS, DMS100
- ISO QSIG Basic Call & QSIG feature transparency
- Channel Associated Signalling (CAS)
- R2 MFC

All Vega gateways support SIP and T.38 Fax.

The Vega 100 gateway has proven interoperability with a wide range of existing telecommunications and VoIP equipment.
